
TALHA SALEEM

Frontend-Focused Full Stack Engineer

Lahore, Pakistan (Remote) | +92 317 435 3728 | csmtalha@gmail.com

[LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Frontend-focused Full Stack Engineer with 5+ years of experience building fast, scalable React and Next.js applications backed by solid backend architecture. Specialized in component-driven frontend development, headless CMS integration with Sanity, Stripe payment systems, and multi-tenant SaaS platforms with role-based access control. Led the development of a production multi-tenant mortgage SaaS platform serving active customers, including tenant-aware UI, RBAC, and Stripe subscription billing. Comfortable owning a feature end to end, from interface to API, with strong attention to performance and clean architecture. Based in Lahore, Pakistan, open to remote roles with teams across the US, UK, and EU.

CORE SKILLS

React / Next.js / TypeScript | Sanity CMS (Headless) | Stripe Payments
Multi-Tenant Architecture | Role-Based Access Control (RBAC)
Vue.js / Composition API | Node.js / NestJS / REST APIs
Tailwind CSS / Responsive Design | PostgreSQL / Prisma | AWS / Vercel / CI-CD

PROFESSIONAL EXPERIENCE

Frontend-Focused Full Stack Engineer (Lead) | Cloudpacer Aug 2022 - Present

Promoted from Full Stack Engineer to lead role. Driving frontend architecture and full stack delivery for a production SaaS product.

- **Built the frontend for a multi-tenant SaaS platform** using Next.js and TypeScript, with tenant-aware UI that adapts based on the logged-in organization's role and permissions.
- **Implemented role-based access control (RBAC)** across the frontend and backend, controlling which UI elements, routes, and actions are visible per user role, with secure tenant data isolation on the API side.
- **Integrated Stripe for subscription billing**, building the customer-facing billing UI, plan upgrade/downgrade flows, payment method management, and webhook-driven UI state updates.
- **Built and maintained the component library** using React, Tailwind CSS, and TypeScript, ensuring consistent design system usage across the entire product.
- **Drove the Vue 2 to Vue 3 migration**, refactoring legacy components and adopting the Composition API, improving maintainability across the frontend codebase.
- **Optimized frontend performance** through code splitting, lazy loading, image optimization, and reducing unnecessary re-renders, cutting dashboard load times significantly.
- **Owned CI/CD pipelines on AWS and Vercel**, enabling fast, reliable deployments with preview environments for every pull request.

Tech Stack: React, Next.js, TypeScript, Tailwind CSS, Vue 3, Node.js, NestJS, PostgreSQL, Stripe, AWS, Vercel

Frontend Developer | Napollo Software Design Jul 2021 - Aug 2022

- **Built interactive frontend interfaces using React**, translating Figma designs into responsive, cross-browser compatible components for client projects.

-
- **Developed and customized WordPress and Shopify storefronts**, including custom themes, Liquid templates, and WooCommerce integrations.
 - **Contributed to reusable component patterns and templates** that sped up delivery across multiple concurrent client projects.

Tech Stack: React, WordPress, Shopify, JavaScript, Figma, HTML/CSS

Web Developer | *Spadasoft*

Feb 2020 - Jun 2021

- **Built and maintained frontend interfaces** for client-facing web applications, ensuring responsive layouts and consistent cross-browser behavior.
- **Implemented UI components from design specs** and integrated REST APIs for reliable data rendering.
- **Optimized frontend performance** through code splitting, image optimization, and lazy loading, improving load times for production apps.

Tech Stack: JavaScript, HTML/CSS, SCSS, React, REST APIs, Git

KEY PROJECT SPOTLIGHT

Multi-Tenant SaaS Platform — Frontend & Architecture | Production | Active Customers

- Built a Next.js + TypeScript frontend serving multiple organizations from a single codebase, with tenant-specific branding and feature flags rendered dynamically per domain.
- Implemented role-based UI rendering — different dashboards, navigation, and permissions for Super Admin, Group Admin, and standard users.
- Integrated Stripe for subscription management — plan selection UI, billing history, payment method updates, and webhook-driven status changes reflected in real time.
- Built reusable, theme-aware component library with Tailwind CSS supporting per-tenant color schemes and branding.
- Worked with structured content patterns similar to headless CMS architecture — content and configuration data-driven from the database, rendered dynamically in the frontend.

EDUCATION

Bachelor of Science in Computer Science

The University of Lahore

CERTIFICATIONS

- Ultimate AWS Certified Cloud Practitioner CLF-C02 (2026)
- Software Architecture & Design of Modern Large Scale Systems
- NestJS Zero to Hero - Modern TypeScript Back-end Development

ADDITIONAL INFORMATION

Availability: Remote (US / UK / EU overlap) | Open to full-time and contract roles | Immediate availability

Languages: English (Professional Working Proficiency), Urdu (Native)

Location: Lahore, Pakistan — fully remote-ready setup
